

LIBERATOR

Our most popular treatment system uses multiple stages of filtration to reduce scale, hardness, chlorine, chloramine, heavy metals, pesticides and many other contaminants! High flow design and high purity medias ensure the most luxurious water treatment system for your water quality improvement needs. Commercial grade components ensure the longest system life and best performance. Full port internals ensure the highest flow rates!

Coconut Shell carbon for chlorine and organic chemical reduction

Superior Catalytic Carbon for enhanced odor, chemical and chloramine reduction.

Redox KDF Cubes can reduce heavy metals and increase the systems chlorine reduction performance

Anthracite media is a "Pure Coal" and has been used in water filtration for generations!

Gem mineral filtration is achieved with a layer of garnet!

High quality Quartz media enhances water distribution.
